Information Common To All Schemes

Risk Profile of the Schemes

Mutual Fund Units involve investment risks including the possible loss of principal. Please read the Scheme Information Document carefully for details on risk factors before investment. Scheme specific risk factors are summarized below:

As per SEBI circular no. SEBI/IMD/CIR No.10/22701/03 dated December 12, 2003, each scheme/plan (including the plans thereunder) should have a minimum of 20 Unit Holders and no single Unit Holder should account for more than 25% of the corpus of such scheme/plan. The aforesaid conditions should be met in each calendar quarter on an average basis. In case of non-fulfilment with the first condition i.e. minimum of 20 investors in the scheme/plan, for each calendar quarter as specified by SEBI, the scheme/plan shall be wound up by following the guidelines prescribed by SEBI and Unit Holders' investment in such scheme/plan would be redeemed at the Applicable NAV. SEBI has further prescribed that if any investor breaches the 25% limit over a quarter, a rebalancing period of one month will be allowed to the investor and thereafter the investor who is in breach of the limit shall be given 15 days notice to redeem his exposure over the 25% limit. In the event of failure on part of the said investor to redeem the excess exposure, the excess holding will be automatically redeemed by the Fund following the guidelines prescribed by SEBI.

Risk Factors pertaining to Equity Schemes/Funds

Equity and equity related securities are volatile and prone to price fluctuations on a daily basis. The liquidity of investments made in the Equity Schemes may be restricted by trading volumes and settlement periods. Settlement periods may be extended significantly by unforeseen circumstances. The inability of the Equity Schemes to make intended securities purchases, due to settlement problems, could cause the Equity Schemes to miss certain investment opportunities. Similarly, the inability to sell securities held in the Equity Schemes' portfolios would result at times, in potential losses to the respective Equity Schemes, should there be a subsequent decline in the value of securities held in such Equity Schemes' portfolios.

Investments in equity and equity related securities involve a degree of risks and investors should not invest in Equity Schemes unless they can afford to take the risk of losing their investment.

Securities which are not quoted on the stock exchanges are inherently illiquid in nature and carry a larger liquidity risk in comparison with securities that are listed on the exchanges or offer other exit options to the investors, including put options. The AMC may choose to invest in unlisted securities that offer attractive yields within the regulatory limit. This may however increase the risk of the portfolio.

The liquidity and valuation of the Schemes' investments due to its holdings of unlisted securities may be affected if they have to be sold prior to the target date of disinvestment.

Investments in money market instruments would involve a moderate credit risk i.e. risk of an issuer's liability to meet the principal payments.

Money market instruments may also be subject to price volatility due to factors such as changes in interest rates, general level of market liquidity and market perception of credit worthiness of the issuer of such instruments. The AMC endeavours to manage such risk by the use of inhouse credit analysis. The NAV of Equity Schemes' Units, to the extent that such Schemes are invested in money market instruments, will be affected by the changes in the level of interest rates. When interest rates in the market rise, the value of a portfolio of money market instruments can be expected to decline. The NAV of FIOF will also be affected by Risks associated with investments made in derivatives. The NAV of the Equity Schemes will also be affected by Risk Factors associated with scrip lending and investments in Foreign Securities.

Risk Profile of the Schemes (contd.)

Risk Factors pertaining to Debt Schemes/Fund

In addition to the factors that affect the values of securities, the NAV of Units of the Debt Schemes will fluctuate with the movement in the broader fixed income, money market and derivatives market and may be influenced by factors influencing such markets in general including but not limited to economic conditions, changes in interest rates, price and volume volatility in the fixed income markets, changes in taxation, currency exchange rates, foreign investments, political, economic or other developments and closure of the stock exchanges. Further the investments made by the Debt Schemes will also be affected by interest rate/price risk, credit risk or default risk, sovereign risk, liquidity risk, reinvestment risk, settlement risk, risk associated with investment in derivatives and foreign securities.

Risks Factors associated with transaction in Units through stock exchange(s)

In respect of transaction in Units of the Scheme through BSE and/or NSE, allotment and redemption of Units on any Business Day will depend upon the order processing/settlement by BSE and/or NSE and their respective clearing corporations on which the Fund has no control.

Additional Scheme Specific Risk Factors

- ◆ **L&TTAF:** By virtue of requirements under ELSS, Units issued under L&TTAF will not be redeemed until the expiry of three years from the date of their allotment. The ability of an investor to realise returns on investments in L&TTAF is consequently restricted for the first three years. Redemption will be made prior to the expiry of the aforesaid three year period only in the event of the death of a Unit Holder, subject to the Units having been held for a period of one year from the date of their allotment.
- ◆ **L&TGRAF:** The assets of the Scheme shall be predominantly invested in the shares/units of the Underlying Scheme. However, due to market conditions in the jurisdiction in which the Scheme invests, the AMC may, for short term purposes and with a view to protect the interest of Unit Holders, deviate from the asset allocation range set out in this Scheme Information Document subject to limitations prescribed in by SEBI/RBI from time to time. Unit Holders will not be given any prior intimation or indication when the composition/asset allocation pattern under the Scheme changes within the broad range set out in the Scheme Information Document. The Scheme's performance will be affected by the performance of the Underlying Scheme and it will be subject to all the risks associated with the Underlying Scheme. Investors will be bearing the expenses of the Scheme in addition to the expenses of the Underlying Scheme. Investors could incur load charges on two occasions. First, on their redemptions/switchouts in the options under the Scheme and second, on the Scheme's investment/redemption/switches in the options under the Underlying Scheme, if any.
- ◆ **L&TIEGF:** To the extent that the Scheme is invested in Gold ETFs, the Scheme will be subject to all risks associated with such ETFs and the underlying assets i.e. gold or gold related instruments that it is tracking. The Scheme can purchase/redeem units of Gold ETFs only through stock exchanges on which such ETFs are listed and not directly through a mutual fund. Thus there could be a liquidity issue. The units of the Gold ETF may trade above (at a premium) or below (at a discount) its net asset value (NAV). The price of the units of a Gold ETF is influenced by the forces of supply and demand. Thus the Scheme may not be able to purchase/redeem units of a Gold ETF at the applicable NAVs.
- ◆ **L&TTSF: Volatility Risk** – Investors may note that AMC/Fund Manager's investment decisions may not be always profitable. The Scheme proposes to invest substantially in equity and equity related securities. The Scheme will, to a lesser extent, also invest in money market securities. Trading volumes, settlement periods and transfer procedures, generally for equity and equity related securities and in particular Midcap and Small Cap stocks, may restrict the liquidity of these investments and experience high volatility
- ◆ **L&TMIP and L&T MIP – WBF:**

Monthly Income is not assured and is subject to the availability of distributable surplus.

Equity securities and equity related securities are volatile and prone to price fluctuations on a daily basis. The liquidity of investments made in the Scheme may be restricted by trading volumes and settlement periods. Settlement periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make intended securities purchases, due to settlement problems, could cause the Scheme to miss certain investment opportunities. Similarly, the inability to sell securities held in the Scheme's portfolio would result at times, in potential losses to the Schemes, should there be a subsequent decline in the value of securities held in the Scheme's portfolio.

The performance and the value of the Scheme's investments may be affected by factors affecting the securities markets such as price and volume volatility in the capital markets, currency exchange rates, changes in law/policies of the Government, taxation laws and political, economic or other developments which may have an adverse bearing on individual securities, a specific sector or all sectors. Consequently, the NAV of the Units may be affected.

The liquidity and valuation of the Scheme's investments due to its holdings of unlisted securities may be affected if they have to be sold prior to their target date of divestment.

The Scheme may invest in securities which are not quoted on a stock exchange ("unlisted securities") which in general are subject to greater price fluctuations, less liquidity and greater risk than those which are traded in the open market. Unlisted securities may lack a liquid secondary market and there can be no assurance that the Schemes will realize its investments in unlisted securities at a fair value.

Direct plan

Investors proposing to purchase units of the scheme directly from the Fund (i.e. investments not routed through an AMFI Registration Number (ARN) Holder) can invest under the Direct Plan. The options referred above (i.e. Dividend (Reinvestment and Payout) and Growth) will be available under the Direct Plan. The scheme shall have a common portfolio i.e. the Direct Plan will not have a segregated portfolio.

Investments under the Direct Plan can be made through various modes offered by the mutual fund for investing directly with the mutual fund (except Stock Exchange Platform(s) and all other platform(s) where investors' applications for subscription of units are routed through distributors).

Investors subscribing under the Direct Plan will have to indicate "Direct Plan" against the scheme name in the application form. Investors should also indicate "Direct" in the ARN column of the application form. However, in case distributor code is mentioned in the application form, but "Direct Plan" is indicated against the scheme name, the distributor code will be ignored and the application will be processed under the Direct Plan. Further, where application is received for the scheme without distributor code or "Direct" mentioned in the ARN Column, the application will be processed under the Direct Plan

Selective capital appreciation opportunities could be explored by extending credit and duration exposure above that offered by a cash fund.</p> <p>The fund management team will take an active view of the interest rate movement supported by quantitative research, to include various parameters of the Indian economy, as well as developments in global markets. Investment views/decisions will be a combination of credit analysis of individual exposures and analysis of macro economic factors to estimate the direction of interest rates and level of liquidity and will be taken, inter alia, on the basis of the following parameters:</p> <ol style="list-style-type: none"> 1. Prevailing interest rate scenario 2. Returns offered relative to alternative investment opportunities. 3. Quality of the security/instrument (including the financial health of the issuer) 4. Maturity profile of the instrument 5. Liquidity of the security 6. Any other factors considered relevant in the opinion of the fund management team. <p>The fund management team, supported by credit research group will generally adopt a bottom-up approach for securities identification to optimise the risk adjusted returns on the diversified portfolio. The credit quality of the portfolio will be maintained and monitored using the in-house research capabilities as well as the inputs from the independent credit rating agencies.</p> <p>The Scheme may invest upto 100% of the net assets of the Scheme in derivatives for the purpose of hedging and portfolio balancing purposes. Hedging does not mean maximization of returns but only attempts to reduce systemic or market risk that may be inherent in the investment.</p> <p>The Scheme may also invest in permitted offshore instruments for diversification.</p>
L&T Global Real Assets Fund	<p>The Scheme will invest in the Underlying Scheme which in turn will primarily invest (at least 70%) in equity securities of companies across the world that provide exposure to commodities, property, industrials, utilities, energy, materials and infrastructure. The fund manager of the Underlying Scheme is free to select any company regardless of size, industry or location.</p> <p>The aim of the Underlying Scheme is to provide investors with long-term capital growth from diversified portfolio of securities.</p>

Name of Scheme	Investment Strategies of the Schemes
L&T Triple Ace Bond Fund	<p>The composition of the portfolio would be designed in such a manner so as to achieve the maximum return, while minimizing the overall risk. The choice of the instruments would also be in accordance with this objective. It may be understood that there is a trade-off between risk and return in investments. The return on a security usually increases with an increase in risk. Given the trade-off, the priority of the Scheme is to minimise the risk, even while trying to achieve the maximum returns. Since the securities with the highest credit rating should have the least risk, the investments is made predominantly in corporate securities (bonds, debentures & commercial papers) with a credit rating of “AAA” ascribed by CRISIL or an equivalent credit rating assigned by other agencies. The Scheme may also invest in privately placed debt of such AAA rated companies.</p> <p>The Scheme would invest mainly in the rated corporate securities. However, the absence of the desirable depth in the secondary market for corporate securities may restrict the pace of investments through the secondary market. Therefore, the funds of the Scheme could be invested in money market instruments like government securities, call money, commercial paper etc. The Scheme would invest in bonds/debentures or any other fixed income securities at least to an extent of 80% of the corpus. The balance will be invested in money market instruments of high quality.</p> <ul style="list-style-type: none"> • The overall portfolio structuring would aim at controlling risk at moderate level. Security specific risk will be minimised by investing only in those companies that have been thoroughly researched in-house. Risk will also be managed through broad diversification of the portfolio within the framework of the Scheme's investment objective and policies. • The AMC will follow a structured investment process in order to identify the best securities for investment and has developed an internal research framework for consistently examining all securities which will focus on the following key factors: <ul style="list-style-type: none"> • Management quality, strategy and vision • Business dynamics • Financial strength of the Company • Free cash flow generation • Returns on capital employed and returns on equity • Credit rating
L&T Monthly Income Plan (Monthly Income is not assured and is subject to the availability of distributable surplus)	<p>The overall portfolio structuring would aim at controlling risk at moderate level. Stock specific risk will be minimized by investing only in those companies that have been thoroughly researched in-house. Risk will also be managed through broad diversification of the portfolios within the framework of the Schemes' investment objective and policies.</p> <p>The Fund Management team endeavors to meet the investment objective whilst maintaining a balance between safety, liquidity and return on investments. With a view to maintain low to medium risk, the Schemes may focus on short to medium-term securities. The Schemes shall be actively managed and the Fund Management team may endeavor to generate superior returns whilst moderating credit and interest rate risk. The Fund Manager shall formulate a view of the interest rate movement based on various parameters of the Indian economy, as well as developments in global markets. Investment views/ decisions inter alia may be taken on the basis of the following parameters:</p> <ul style="list-style-type: none"> • Returns offered relative to alternative investment opportunities. • Liquidity of the security • Prevailing interest rate scenario • Quality of the security/instrument (including the financial health of the issuer) • Maturity profile of the instrument • Management quality, strategy and vision • Business dynamics • Financial strength of the company • Free cash flow generation • Returns on capital employed and returns on equity • Intangible assets such as brands, distribution etc. • Valuation in relation to the history of the stock as well as its peer group. • Any other factors considered relevant in the opinion of the Fund Management team. <p>The Scheme may also use derivatives to reduce the volatility of the portfolio and/or to enhance the portfolio returns. The Scheme may try to identify securities that yield relative value over others for similar risk and liquidity level. Various analytical tools like yield curve analysis, spreads between asset classes, horizon returns, forward implied interest rates, may be deployed to evaluate various investment options. Investments in debt instruments carry various risks like interest rate risk, liquidity risk, default risk, reinvestment risk etc. Whilst these cannot be done away with, they may be minimized by diversification and effective use of hedging techniques.</p> <p>Other than investing in overseas securities, the Scheme may use techniques and instruments such as futures and options, warrants etc. to hedge the risk of fluctuations in the value of the investment portfolio. The scheme may enter into derivatives transactions in a recognized stock exchange for the purpose of hedging and portfolio balancing in accordance with the guidelines issued by SEBI. These derivative instruments will include interest rate swaps, forward rate agreements, interest rate futures, index and stock futures and options or any other derivative instruments that are permissible or may be permissible in future under applicable regulations.</p> <p>Using Index Futures to increase percentage investments in equities:</p> <p>This strategy will be used for the purpose of generating returns on idle cash, pending its investment in equities. The Scheme is open ended in nature and subject to daily inflows. There may be a time lag between the inflow of funds and their deployment in equities. If so desired, the Investment Manager would be able to take immediate exposure to equities via index futures. The position in index futures may be reversed in a phased manner, as the funds are deployed in the equity markets.</p> <p>Using Index Futures to decrease percentage investments in equities:</p> <p>Similarly, in the case of a pending outflow of funds or where a negative view is taken on the market, the Investment Manager, in order to reduce exposure in equities may 'sell the index forward' by taking a short position in index Futures. This position can be unwound over a period in time by simultaneously selling the equity shares from the investment portfolio of the Scheme. Since the price of the futures contracts is expected to be positively correlated with the index, the value of a short position will move in the direction opposite to the movement in the index. The strategy of taking a short position in the index future is a hedging strategy and reduces the market risk and volatility of the portfolio.</p> <p>Portfolio Protection Using Index Put And Stock Put Options</p> <p>The purchase of an index put option gives the scheme the option of selling the index to the writer of the put at a predetermined level of the index, called the strike price. If the index falls below this level, the scheme benefits from the rise in the value of the put option.</p> <p>Similarly, as a stock hedging strategy, the purchase of a put option on the underlying stock would give the scheme the option to sell the stock to the writer of the option at the predetermined strike price. This would lead to a capping of the loss in value of a stock. The contract value of options on individual stocks will be limited to 5% of the net assets of the Scheme.</p>
L&T MIP - Wealth Builder Fund (Monthly Income is not assured & is subject to the availability of distributable surplus)	<p>Investment Strategies for Equity Portion of the Portfolio</p> <p>The Scheme will invest in diversified portfolio of equity and equity related instruments to generate returns. The Scheme will invest in a universe of stocks, which will be identified using fundamental analysis. The Scheme will invest in a portfolio of both value and growth stocks. The strategy will be to build up diversified portfolio of quality stocks, with medium to long term potential.</p> <p>The Scheme proposes to invest upto 30% of the corpus in equity and equity related instruments.</p> <ul style="list-style-type: none"> • The overall portfolio structuring would aim at controlling risk at moderate level.
