### TATA DIVIDEND YIELD FUND (TDYF)

#### PRODUCT LABEL:

**This product is suitable for investors who are seeking\*:**

- Long Term Capital Appreciation
- Investment (minimum 70%) in equity & equity related instruments/stocks having dividend yield higher than dividend yield of stocks of BSE SENSEX.
- The scheme is classified as **High Risk** (BROWN). Investors understand that their principal will be at high risk

**\*Investors should consult their financial advisors if in doubt about whether the product is suitable for them.**

**FUND MANAGER:** Rupesh Patel

**INVESTMENT OBJECTIVE:** The investment objective of the Scheme is to provide income distribution and /or medium to long term capital gains by investing predominantly in high dividend yield stocks.

#### ASSET ALLOCATION PATTERN OF THE SCHEME:

**Proportion (%) of funds available			
Instrument	Minimum	Maximum	Risk Profile
High Dividend Yield Equity & equity related instruments	70	100	High
Other equity / equity related instruments	0	30	High
Debt & Money Market Instruments *	0	30	Low to Medium

\* Securitised debt will not normally exceed 50% of the net assets of the scheme. Investments in derivative instruments may be used in the manner & to extent permissible under SEBI Regulations. \*\* at the time of investments. The Scheme will have a maximum derivative net position of 50% of the net assets of the scheme.

**Investment Strategy:** The fund manager will invest primarily in equity shares that have a high dividend yield. Dividend Yield will be considered as high if it is in greater than the Dividend Yield of the BSE SENSEX last released / published by BSE. Dividend Yield released / published by the BSE is available on its website: [www.bseindia.com](http://www.bseindia.com).

High Dividend Yield can be defined as the Yield or returns by way of dividend (that is the total ₹ Dividend per share declared for the previous accounting year ) which an equity

share gives as compared with the market price of the share at the time of investment. A high dividend yielding share is one which gives a higher dividend yield than that of the BSE SENSEX (last published). e.g. Price of a script : ₹ 50/- and Dividend Declared : 40% (i.e. ₹ 4/- on face value ₹ 10/-) (Total dividend, including interim if any, declared during the last accounting year). Hence the dividend yield of the script is:  $8\% (4 / 50 * 100)$ .

Supposing the dividend yield of the BSE SENSEX as on date of purchase of the above script is 5%, since the Dividend Yield of the script is more than that of the BSE SENSEX i.e 8%, the same will be considered as a high dividend yield stock. (Other script selection criteria would only be applicable once the initial dividend yield criteria is fulfilled). Historically high dividend yielding stocks provide greater degree of protection in a falling market. At the same time, it provides good possibilities of capital appreciation in reviving market, resulting in good capital gains. Re rating for such stocks is always a possibility due to its low price to adjusted book value ratio and its low market capitalization. Investment in high dividend stocks targets to achieve better yield than what is available in interest bearing securities, but avoiding the undue exposure to the volatile stock markets. It is a general belief that high dividend paying companies are rich in cash generations from its business. At the same time high dividend yield indicates under-pricing for the stock inspite of its cash generation. This can unlock potential growth for the stock prices.

Since the high dividend yield is only one of the factors involved in the evaluation of a company's investment-worthiness, investment decisions cannot be based on high dividend yield alone. Other parameters such as management competitiveness, business competitiveness, growth prospects, etc would also be considered. However, all other factors remaining favourable, investment would be made primarily in high dividend stocks as mentioned above. Under normal circumstances atleast 70% of the scheme's assets would be invested in high dividend yield stocks. The Fund could also invest in equity shares of other companies i.e other than high dividend stocks to the extent of 30% of the net assets.

Further the scheme may also invest in not exceeding 30% of the scheme's assets in debt instruments such as non convertible portion of Convertible Debentures (Khokas), Non Convertible Debentures, Securitised Debt, Secured Premium Notes, Zero Interest Bonds, Deep Discount Bonds, Floating Rates Bonds/Notes and Government securities and Money Market Instrument like Call Deposit, Repos, Commercial Paper, Certificate of Deposit, Treasury Bills etc. This is for providing ongoing liquidity & preservation of capital in a bear market.

**FUND MANAGER:** Amish Munshi & Nainesh Rajani (Overseas Portfolio)

**INVESTMENT OBJECTIVE:** The investment objective of the Scheme is to provide income distribution and / or medium to long term capital gains by investing predominantly in equity/ equity related instrument of the companies in the infrastructure sector.

### ASSET ALLOCATION PATTERN OF THE SCHEME:

Instrument	Indicative allocations **(% of total assets)		Risk Profile
	Minimum Upto	Maximum Upto	
Equity and Equity related instruments of companies in the infrastructure sector	70	100	High
Equity and equity related instruments of other companies	0	30	High

The Scheme will have a maximum derivative net position of 50% of the net assets of the scheme. \*\* at the time of investments. **Investment Strategy:** Infrastructure sector plays important role in country's development and GDP growth. India has already negotiated the difficult transition from public infrastructure creation to a market-determined model. An ambitious reform programme initiated involving a shift from a controlled to an open market economy has opened doors for private sector / foreign investment in infrastructure projects such as energy, petroleum, telecommunications transportation sectors etc. And in the Indian context, removal of regulatory and availability constraints on any product or service, has catalyzed investments, attracted competition and rationalized costs leading to a new growth trajectory. The infrastructure sector in the country is thus poised for accelerated growth in the coming years. There is already momentum in highways, power generation and ports, where a successful track record has fostered a virtuous cycle of more success.

With India rapidly moving on the path to establishing itself as a global sourcing base for manufactured products and gearing up to carve a share of the textile opportunity post-quota removal in 2005, it is imperative that ports be modernized. The macro-level fiscal budget linked solution for the overdues of SEBs to utilities (NTPC, NHPC), the successful implementation of the Accelerated Power Development & Reforms Programme (APDRP) to modernize the overloaded T&D network and the legislation of comprehensive reforms by way of the Electricity Act 2003 all have paved way for large investment in the Power sector. The biggest trigger for the oil & gas sector is the large gas finds. Besides, with the sector put on the reform track beginning with dismantling of Administered Pricing Mechanism (APM) in April 2002, competitive pressures are set to intensify and refinery upgradation to meet Euro-II & III fuel norms are a given. Telecom is another sector where significant progress has been made. India is already the fastest growing mobility market in the world.

Infrastructure sector comprises of Energy, Power and Power Equipment, Oil & Gas and related industries, Petroleum and related industries, Coal, Mining, Aluminium and other Metal Industries, Steel and Steel Utilities, Engineering, Construction and Construction Related Industries, Cement, Transportation, Ports, Telecommunications, Housing, Banking and Financial Services and Healthcare and Related Industries.

The Scheme will invest primarily in equity / equity related instruments of the companies in infrastructure sector. The scheme may also invest in other equities and debt instruments such as non convertible portion of Convertible Debentures (Khokas), Non Convertible Debentures, Securitised Debt, Secured Premium Notes, Zero Interest Bonds, Deep Discount Bonds, Floating Rate Bonds / Notes, Government securities and Money Market Instrument like Call Deposit, Repos, Commercial Paper, Certificate of Deposit, Treasury Bills, etc. for providing ongoing liquidity & preservation of capital in a bear market.

The Scheme will emphasize well managed, high quality companies with above average growth prospects that can be purchased at a reasonable price. Typically these companies will be highly competitive, with a large and growing market share. #### TATA EQUITY P/E FUND (TEQPEF)

##### PRODUCT LABEL:

**This product is suitable for investors who are seeking\*:**

- Long Term Capital Appreciation
- Investment (minimum 70%) in equity & equity related instruments of companies whose rolling P/E is lower than rolling P/E of BSE SENSEX.
- The scheme is classified as **High Risk** (BROWN). Investors understand that their principal will be at high risk

**\*Investors should consult their financial advisors if in doubt about whether the product is suitable for them.**

**FUND MANAGER:** Atul Bhole

**INVESTMENT OBJECTIVE:** The investment objective of the Scheme is to provide reasonable & regular income along with possible capital appreciation to its Unitholder.

##### ASSET ALLOCATION PATTERN OF THE SCHEME:

**Proportion (%) of funds available			
Instrument	Minimum	Maximum	Risk Profile
Equity & Equity Related (Companies whose rolling P/E at the time of investment is lower than the rolling P/E of the BSE SENSEX)	70	100	High
Equity and Equity Related (Others Companies)	0	30	High
Debt (Including Money Market)*	0	20	Low to Medium

Investment by the scheme in securitised debt, will not normally exceed 50% of debt & money market instruments. Investment in derivative instruments may be done for trading, hedging & Portfolio balancing. The scheme will have maximum derivative net position of 50% of the net assets of the scheme. \*\* at the time of investments.

**Investment Strategy:** The scheme seeks to identify under valued companies and under normal circumstances at least 70% of the net assets would be invested in shares which have a rolling P/E ratio based on the past four quarterly earnings for individual companies as compared with the rolling P/E of the BSE SENSEX based on past four quarterly earnings of the BSE SENSEX stocks. Sometimes the P/E ratio is also referred as the "P/E multiple", because it could be an indication of how much investors may be willing to pay per rupee of earnings. A company with a high P/E ratio may have to eventually live up to the high expectations of the investors by substantially increasing its earnings, failing which its stock price could drop. It may be useful to compare the P/E ratios of companies in the same industry, or to the market in general, or against the company's own historical P/E.

The rolling P/E of the last completed quarter is considered for the company as well as for the BSE SENSEX. The rolling P/E is used, and not the forward P/E, as forward P/E is based on estimates of future profits, and is therefore uncertain. The Fund would invest in stocks which are a part of the BSE SENSEX as well as in those which are not a part of the BSE SENSEX. There could also be companies which are poised for a sharp turnaround or a substantial improvement in profitability wherein the rolling EPS (and therefore the rolling P/E) may not be truly representative of the company's valuations. The Fund may also invest in such companies (whose rolling P/E may be higher than that of the BSE SENSEX), but such investments would be restricted to 30% of the net assets / funds available.

Since the P/E ratio is only one of the factors involved in the evaluation of a company's investment-worthiness, investment decisions cannot be based on this ratio alone. Other parameters such as management competitiveness, business competitiveness, growth prospects, etc would also be considered. However, all other factors remaining favourable, investment would be made only if the rolling P/E of the scrip is less than the rolling P/E of the BSE SENSEX at the time of investment. In the case of an initial public offering of equity shares of a company (i.e. there is no traded price available), the book-building price or the issue price would be considered in lieu of the traded price for the purposes of computation of the P/E ratio of the company.

The Tata Equity P/E Fund would seek to identify undervalued companies in the market, and predominantly invest in companies whose rolling P/E is lesser than that of the BSE SENSEX (these companies may or may not be a part of the BSE SENSEX). The Fund could also invest in equity shares of other companies and in debt and money market instruments to the extent of 30% of the net assets.

#### (M) UNDERSTANDING DIVIDEND TRIGGER OPTION FOR TATA EQUITY P/E FUND

- I) Dividend Triggers** – The Fund intends to declare dividends as and when there is an appreciation in the NAV of the options by pre-defined trigger level i.e. 5% (Dividend Trigger Option A) and 10% (Dividend Trigger Option B) in a calendar quarter. Record date for dividend will be announced within five working days from the date of the occurrence of trigger. Maximum only one dividend will be declared in one calendar quarter. The quantum of dividend shall be decided by the Trustees and will be subject to availability of distributable surplus. The base NAV for calculation of dividend trigger levels in Option A & Option B will be the lowest NAV of the respective option during the immediate preceding calendar quarter.

**Please Note** – No dividend will be declared if the NAV does not reach to the trigger level & irrespective of the appreciation level of the NAV, not more than one dividend will be declared in a particular calendar quarter. Further, it is also possible that trigger level is reached only for Option A and not for option B, in that case dividend will be declared only in option A.

#### II) The Salient features of Dividend Trigger Option are as follows:

1.) Maximum only one dividend will be declared in one calendar quarter irrespective of the appreciation level of the NAV. 2.) Record date for dividend will be announced within five working days from the date of the occurrence of trigger. 3.) The quantum of dividend shall be decided by the Trustees and will be subject to availability of distributable surplus. 4.) The base NAV for calculation of dividend trigger levels in Option A & Option B will be the lowest NAV of the respective option during the immediate preceding calendar quarter. 5.) Further, it is also possible that trigger level is reached only for Option A and not for option B; in that case dividend will be declared only in option A. 6.) All plans / options under the scheme shall have common portfolio. 7.) The Dividend Trigger Option and sub-options there under will form an integral part of Tata Equity P/E Fund.

Notes: Declaration of dividend is at the discretion of Trustees. As per the prevailing regulatory guidelines, dividend can be paid only out of distributable surplus. Due to various reasons beyond the control of the Investment Manager, it may be possible that in spite of appreciation in NAV there is no distributable surplus available on the record date, under such scenario, no dividend will be distributed.

In a nutshell, under this option you can choose a specific rate of target appreciation which if achieved would automatically book profit on your behalf by way of dividend. This helps you to book profits at your pre-determined levels not just once but multiple times although restricted to one per quarter.

To enable you to understand how the dividend trigger option works we have put together an illustration explaining its working:

#### Illustration

The lowest NAVs during preceding calendar quarter (April – June, 2013) were ₹ 20 & 25 for Dividend Trigger Option A & Dividend Trigger Option B respectively. For the purpose of calculating the trigger levels for the calendar quarter July – September 2013, these NAVs shall be treated as the base NAVs of the respective options.

Trigger level for Option A would be: ₹ 21 (i.e. 5% appreciation in the base NAV of ₹ 20).

Trigger level for option B would be: ₹ 27.50 (i.e. 10% appreciation in the base NAV of ₹ 25).

As & when NAV appreciates to these levels during the calendar quarter (July – September 2013), the fund shall initiate declaration of dividends (subject to

availability of distributable surplus) within five working days. Likewise, base NAVs & dividend trigger levels shall be decided for subsequent calendar quarters.

**Subject to the Regulations & disclosure requirements as specified by SEBI, the Trustees reserve the right to amend / modify any or all the features of the Dividend Trigger Option, including the minimum application amount, recurring expenses, load structure etc. from time to time.**

## RISK PROFILE OF THE SCHEMES

**Mutual Fund Units involve investment risks including the possible loss of principal. Please read the SID carefully for details on risk factors before investments.**

**Scheme specific Risk Factors are summarized below:**

**TDYF:** Risk associated with high dividend yield stocks : Though the investments would be in companies having a track record of dividend payments, the performance of the scheme would inter alia depend on the ability of these companies to sustain dividends in future.

**TGEIF:** To the extent the assets of the scheme are invested in overseas financial assets, there may be risks associated with currency movements, restrictions on repatriation & transaction procedures in overseas market. Further, the repatriation of capital to India may also be hampered by changes in regulations or political circumstances as well as the application to it of other restrictions on investment. In addition, country risks would include events such as introduction of extraordinary exchange controls, economic deterioration, bi-lateral conflict leading to immobilization of the overseas financial assets & the prevalent tax laws of the respective jurisdiction for execution of trades or otherwise.

The Scheme may also invest in ADRs / GDRs / Foreign Debt Securities as permitted by Reserve Bank of India & Securities & Exchange Board of India. To the extent that some part of the assets of the Schemes may be invested in securities denominated in foreign currencies, the Indian Rupee equivalent of the net assets, distributions & income may be adversely affected by the changes in the value of certain foreign currencies relative to the Indian Rupee. The repatriation of capital also may be hampered by changes in regulations concerning exchange controls or political circumstances as well as the application to it of other restrictions on investment.

As the portfolio will invest in stocks of different countries, the portfolio shall be exposed to the political, economic & social risks with respect to each country. However, the portfolio manager shall ensure that his exposure to each country is limited so that the portfolio is not exposed to one country. Investments in various economies will also diversify & reduce this risk.

In respect of the corpus of the Scheme that is invested in overseas mutual fund schemes, investors shall bear the proportionate recurring expenses of such underlying scheme(s), in addition to the recurring expenses of the Scheme. Therefore, the returns attributable to such investments by the Scheme may be impacted or may, at times, be lower than the returns that the investors could obtain by directly investing in the said underlying scheme.

The scheme being a sector specific scheme, will be affected by the risks associated with Infrastructure and related sectors.

**TMIF and TMPF (Monthly Income is not assured and is subject to the availability of distributable surplus) :** As with debt instruments, changes in interest rate may affect the Scheme's net asset value as the prices of instruments generally increase as interest rates decline and generally decrease as interest rates rise. Prices of long-term securities generally fluctuate more in response to interest rate changes than do short-term securities. Indian debt and government securities markets can be volatile leading to the possibility of price movements up or down in fixed income securities and thereby to possible movements in the NAV. Trading volumes and settlement periods may restrict liquidity in equity and debt investments.

**TIFN/TIFS:** Tracking errors are inherent in any index fund and such errors may cause the scheme to generate return which are not in line with the performance of the S & P CNX Nifty / BSE SENSEX or one or more securities covered by / included in the S & P CNX Nifty / BSE SENSEX. To the extent that some assets/ funds may be deployed in Stock Lending / Money Market Operations, the Scheme will be subject to risks relating to such deployment / operations and may also contribute to tracking errors. The deviation of the NAV of the respective plan from the Sensex or Nifty is expected to be in the range of 2-3% per annum. However it may so be that the actual tracking error can be higher or lower than the range given. In case of investments in derivative instruments like index futures, the risk/reward would be the same as investments in portfolio of shares representing an index. However, there may be a cost attached to buying an index future. Further, there could be an element of settlement risk, which could be different from the risk in settling physical shares and there is a risk attached to the liquidity and the depth of the index futures market as it is an untested market.

**TEMF:** Risks associated with Derivatives Derivative products are specialised instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. Derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative add to the portfolio and the ability to forecast price of securities being hedged and interest rate movements correctly. There is a possibility that a loss may be sustained by the portfolio as a result of the failure of another party (usually referred to as the "counterparty") to comply with the terms of the derivatives contract. Other risks in using derivatives include the risk of mis-pricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.

**TISF:** The scheme being sector specific will be affected by risks associated with the Infrastructure sector.

**TIGIF: Risk Associated with overseas investments:**

- To the extent the assets of the scheme are invested in overseas financial assets, there may be risks associated with currency movements, restrictions on repatriation and transaction procedures in overseas market. Further, the repatriation of capital to India may also be hampered by changes in regulations or political circumstances as well as the application to it of other restrictions on investment. In addition, country risks would include events such as introduction of extraordinary exchange controls,

economic deterioration, bi-lateral conflict leading to immobilization of the overseas financial assets and the prevalent tax laws of the respective jurisdiction for execution of trades or otherwise. • The Scheme may also invest in ADRs / GDRs / Foreign Debt Securities as permitted by Reserve Bank of India and Securities and Exchange Board of India. To the extent that some part of the assets of the Schemes may be invested in securities denominated in foreign currencies, the Indian Rupee equivalent of the net assets, distributions and income may be adversely affected by the changes in the value of certain foreign currencies relative to the Indian Rupee. The repatriation of capital also may be hampered by changes in regulations concerning exchange controls or political circumstances as well as the application to it of other restrictions on investment. • As the portfolio will invest in stocks of different countries, the portfolio shall be exposed to the political, economic and social risks with respect to each country. However, the portfolio manager shall ensure that his exposure to each country is limited so that the portfolio is not exposed to one country. Investments in various economies will also diversify and reduce this risk. • In respect of the corpus of the Scheme that is invested in overseas mutual fund schemes, investors shall bear the proportionate recurring expenses of such underlying scheme(s), in addition to the recurring expenses of the Scheme. Therefore, the returns attributable to such investments by the Scheme may be impacted or may, at times, be lower than the returns that the investors could obtain by directly investing in the said underlying scheme. The scheme being sector specific will be affected by risks associated with the Infrastructure sector.

**TLF, TLMF: Risk Factors Concerning Floating Rate Debt Instruments and Fixed Rate Debt Instruments Swapped For Floating Rate Return:**

**1. Basis Risk (Interest Rate Movement):** During the life of floating rate security or a swap the underlying benchmark index may become less active and may not capture the actual movement in interest rates or at times the benchmark may cease to exist. These type of events may result in loss of value in the portfolio.

**2. Spread Risk:** In a floating rate security the coupon is expressed in terms of a spread or mark up over the benchmark rate. However depending upon the market conditions the spreads may move adversely or favourably leading to fluctuation in NAV. In case of downward movement of interest rates, floating rate debt instruments will give a lower return than fixed rate debt instruments

Mutual Fund Units involve investment risks including the possible loss of principal. Please read the SID carefully for details on risk factors before investments. Scheme specific Risk Factors are summarised below:

All investments in Mutual Funds are subject to market risks and there can be no assurance that the scheme's objective will be achieved.

- The present schemes are not guaranteed or assured return schemes.
- Investments in debt securities are subject to interest rate risk, credit risk & liquidity risk.

## DIVIDEND POLICY

In case of Dividend Option the profits received / earned and so retained and reinvested may be distributed as dividend, to the unitholders who hold the units on the record date of declaration of the dividend, at appropriate rates (after providing for all relevant ongoing expenses, etc.) and at appropriate intervals as may be decided by the AMC and/or Trustee Company. The dividend distribution warrants shall be despatched within 30 days of the declaration of the dividend. Guided by the philosophy of value-oriented returns, the Trustee Company may periodically capitalise net earnings of the Scheme (including interest income and realised gains on the Securities) by way of allotment/credit of bonus Units to the Unitholders Accounts in either option.

**Dividend Payout Option:** Unitholders have the facility of either redeem the dividend in cash (i.e by dividend warrant / direct transfer, etc) or to reinvest dividend within the scheme. In case of daily dividend option, the dividend will be compulsorily reinvested within the option at relevant ex - dividend NAV.

**Dividend Reinvestment Option:** Unitholders under this Option also have the facility of reinvestment of the dividend so declared, if so desired. Dividend Distribution Warrants will not be despatched to such Unitholders. The dividend declared would be reinvested in the Scheme on the immediately following ex-dividend date.

**TMIF, TMPF, TIFN, TIFS, TBF (Monthly Dividend Option), TLF, TSTBF, TIF, TGSE, TIFP, TFRF-LT, TTMF, TGSMF, TGMTF, TLMF, TMMF, TDBF:** In order to reduce the expenses of the scheme and also for the convenience of the investors if dividend amount is less than ₹ 250/- (or any other amount as may be specified by the AMC from time to time). The dividend shall be reinvested within the scheme at the applicable ex dividend NAV.

For all the above schemes, the Trustees can change the periodicity the dividends depending upon the availability of distributable profit / surplus.

**TFF:** If Dividend amount is less than ₹ 500/- the dividend amount will be compulsorily reinvested in the scheme on the next business day at relevant ex - dividend NAV.

**Under each scheme:** The Fund does not assure any targeted annual return / income nor any capitalisation ratio. Accumulation of earnings and / or capitalisation of bonus units and the consequent determination of NAV, may be suspended temporarily or indefinitely.

**Dividend Sweep Facility:** Under this facility investor can opt for reinvestment of dividend into any other scheme of Tata Mutual Fund. This facility is available only for those investors who have opted for dividend reinvestment facility. This facility is not available to those investors who have opted for dividend payout facility. Under this facility, the net dividend amount (i.e net of statutory levy / taxes if any) will be automatically invested on the ex dividend date into other scheme of TATA Mutual Fund specified by the investor at the applicable NAV of that scheme & accordingly equivalent units will be allotted in lieu of dividend, subject to the terms of the schemes. The minimum and maximum amount is not applicable for this facility. No entry load or exit load will be levied on the units issued in lieu of dividend. AMC reserves the right to modify or withdraw this facility without prior notice.

Dividend Sweep facility is not available in those plans where dividend distribution/ declaration frequency is daily.

**Default Option:** For default option of all schemes, kindly refer page no. 39 & 40.

**Book Closure:** Please note that whenever any dividend is declared by the scheme, there may be a book closure and during that period units of the scheme will not be traded on the stock exchange.
